

Photo 3. Location 2-b, upper part of east-west cliff beside apartment entrance, Brittany Drive. 15 cm pen. Cross-bedded, bioclastic limestone. Cross-beds in coarsely clastic units 3 and 4 indicate easterly current flow whereas cross-beds in finer clastic units 2 and 5 indicate that the flow varied in direction. Trough cross-beds in unit 2 suggest flow at a high angle to the cliff face.
